optical wdm networks principles and practice the springer international series

Thu, 17 Jan 2019 09:21:00 GMT optical wdm networks principles and pdf - A passive optical network (PON) is a telecommunications technology used to provide fiber to the end consumer, both domestic and commercial. A PON's distinguishing feature is that it implements a point-to-multipoint architecture, in which unpowered fiber optic splitters are used to enable a single optical fiber to serve multiple end-points. Thu, 02 Jan 2014 21:10:00 GMT Passive optical network - Wikipedia - An optical fiber or optical fibre is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over ...
