- A typical EVAP system is a fully closed system designed to maintain stable fuel tank pressures without allowing fuel vapours to escape into the atmosphere. A system would usually consist of the fuel tank, the fuel tank cap with a vacuum check valve, a charcoal canister with vacuum and pressure check valves, a thermo vacuum valve, and a ported vacuum purge port. Fuel vapours are naturally ...

Evaporative Emission Regulations and EVAP Systems ... - The ECM with its sensors and actuators is often referred to as the electronic control system. It is important to keep in mind while diagnosing engine concerns that the fundamentals of engine operation (correct mixture of air and fuel sufficiently compressed and ignited at the proper time) are not different. The following is an overview of these systems. Section 1 Introduction to Engine Control ... Introduction to Engine Control Systems “ Testroete - Automotive Fundamentals Picture
