axial expansion joints will
give many years of trouble
free service. However the
expansion joints should be
periodically inspected for
signs of deterioration.
Anchors and pipe alignment
should also be examined.

expansion joints can move
in all lateral directions
simultaneously for
absorbing expansion from
two pipe sections in
different directions. The
lateral expansion joint is
normally equipped with
fixtures such as external tie
rods, which allow the unit
to absorb movements in all
lateral directions but also to
absorb the pressure thrust
(incl. full vacuum). Lateral
