In this post let us discuss the bounds on communication given the signal power and bandwidth constraint. Mon, 07 Jan 2019 15:23:00 GMT Bounds on Communication based on Shannon's capacity - In electronics, noise temperature is one way of expressing the level of available noise power introduced by a component

or source. The power spectral density of the noise is expressed in terms of the temperature (in kelvins) that would produce that level of Johnson's Nyquist noise, thus: Sun, 06 Jan 2019 07:11:00 GMT Noise temperature - Wikipedia - harbors of heaven bethlehem and the places we love the bad ass bible the bible s greatest hits remixed doing time in the depression everyday life in texas and ... Nice approach. One would
also need to look at the
range requirement of the
communication link. To
start off, assuming a
free-space path loss model,
transmit power and receiver
noise bandwidth one can
get a good estimate for the
range. BER for BPSK in
